

DID YOU KNOW THAT...?

...at least **20%** of energy used
by industrial facilities near settlements
is **potentially available as heat**
for Energy Community use?

...the total energy consumption of Energy
Community members can be reduced by
5-10% through **attitude change**,
thus directly contributing
to **increased energy
independence?**

...since **2001** authorities in
the whole EU
must permit the creation of
Renewable Energy Communities
aimed at self-sufficiency?
